DATE MAILED: 01/09/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/601,029

Applicant(s)

HIMMELSBACH ET AL.

Examiner

Jeremy R. Pierce

Art Unit

1771

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 November 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 14, 2003 has been entered.

Response to Amendment

2. Applicant's amendment is non-compliant according to 37 CFR 1.121 because each claim has not been identified with its proper status identifier. Claims 2-28 have been amended, but all have the status identifier of "previously presented" rather than "currently amended." To avoid any future delays, future amendments to claims must have the proper status identifier.

3. Applicant's amendment amends claims 1-28 and adds new claims 33 and 34. Claims 1-34 are currently pending.

Claim Objections

4. Claim 9 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim, or amend the claim to place the claim in proper dependent

Art Unit: 1771

form, or rewrite the claim in independent form. The limitation that the adhesive composition is a hot-melt composition is already present in claim 1.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Regarding claim 12, the phrase "especially" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

7. Regarding claim 16, the phrase "preferably" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Double Patenting

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1771

9. Claims 1-34 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-27 of U.S. Patent No. 6,555,730. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are directed to a backing material for medical purposes comprising a stitch-bonded fabric.

Claim Rejections - 35 USC § 102

10. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

11. Claims 1, 7-9, 11-14, 16-18, 20, 24, 29, 30, and 33 are rejected under 35 U.S.C. 102(e) as being anticipated by Lucast et al. (U.S. Patent No. 6,479,073).

Lucast et al. disclose a medical tape for use on human skin (column 1, lines 5-20). Lucast et al. teach the substrate layer for the tape may be a nonwoven fabric

Art Unit: 1771

including stitch-bonded fabrics (column 3, line 2). The adhesive composition may comprise a styrene block copolymer (column 4, lines 17-21). The examples of Lucast et al. show the presence of benzoyl peroxide, a pharmacological agent, in the adhesive (column 14, line 28). With regard to claim 7, the backing material of Lucast et al. would be tearable by hand because it is used as medical tape. With regard to claims 8 and 24, the benzoyl peroxide is present within the claimed range (column 14, lines 25-29). With regard to claim 11, Lucast et al. disclose using foaming agents in the adhesive (column 5, line 19). With regard to claim 12, the adhesive may be discontinuously coated to the backing material (column 1, line 48). With regard to claim 13, the limitation of the adhesive being sprayed on is a processing limitation that would not materially alter the claimed product. With regard to claim 14, Lucast et al. teach applying adhesive in a dot pattern (column 10, line 62). With regard to claim 16, the adhesive could be sterilized via radiation. With regard to claims 17 and 18, Lucast et al. disclose the backing incorporate a low adhesion backside layer opposite the side where adhesive is located (column 3, lines 11-18). This layer would also cover the backing material according to claim 20. With regard to claim 33, the adhesive may comprise up to 20% of polymer material that is not a copolymer (column 4, lines 35-42).

Claim Rejections - 35 USC § 102/103

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 1771

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. Claims 4, 10, 25, and 26 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Lucast et al.

Although Lucast et al. do not explicitly teach the limitations of dynamic-complex glass transition temperatures at a frequency of 0.1 rad/s, it is reasonable to presume that said limitations are inherent to the invention. Support for said presumption is found in the use of similar materials (i.e. adhesive composition comprising styrene block copolymers) and in the similar production steps (i.e. coating the adhesive on a stitch-bonded fabric) used to produce the medical tape. The burden is upon the Applicant to prove otherwise. *In re Fitzgerald*, 205 USPQ 594. In the alternative, it would have been obvious to one having ordinary skill in the art to use adhesive with the claimed glass transition temperatures in order to provide the optimal amount of tackiness for use as a medical tape. Note *In re Best*, 195 USPQ 433, footnote 4 (CCPA 1977) as to the providing of this rejection under 35 USC 103 in addition to the rejection made above under 35 USC 102.

With regard to claim 4, although Lucast et al. do not explicitly teach the limitation of the compression force generated by the backing material at an elongation of 20 to 70%, it is reasonable to presume that said limitations are inherent to the invention. Support for said presumption is found in the use of similar materials (i.e. polyester) and in the similar production steps (i.e. stitch-bonded nonwoven) used to produce the medical tape. The burden is upon the Applicant to prove otherwise. *In re Fitzgerald*, 205 USPQ 594. In the alternative, it would have been obvious to one having ordinary

Art Unit: 1771

skill in the art to provide a compression force of from 0.2 N/cm to 10 N/cm at an elongation of from 20 to 70% in order to create a medical tape with the desired strength, elongation, and break properties that are known in the art to be adjustable.

Claim Rejections - 35 USC § 103

14. Claims 3, 21, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lucast et al.

With regard to claims 3, 21, and 22, Lucast et al. do not disclose how many stitches are present on backing layer of a stitch-bonded fabric per centimeter. The number of stitches in the backing layer would be a result effective variable that would alter the strength of the web, with more stitches supplying a stronger web. It would have been obvious to one having ordinary skill in the art to provide 5 to 50 longitudinal stitches per centimeter in order to create a stitch-bonded fabric with a desired strength and rigidity provided by the stitches, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

With regard to claims 5 and 23, Lucast et al. do not disclose a basis weight for the backing material. It would have been obvious to a person having ordinary skill in the art to provide a stitch-bonded nonwoven with a basis weight of between 10 and 350 grams per square meter in order to make the tape with a usable rigidity desired in the field of medical tapes for use on human skin.

With regard to claims 15, 27, and 28, Lucast et al. do not disclose the weight per unit area of the adhesive on the backing material. The amount of adhesive is a result effective variable that would affect the degree of adhesion the tape would have to the skin. It would have been obvious to one having ordinary skill in the art to provide between 130 and 500 grams per square meter of adhesive in order to create a medical tape with the optimum amount of adhesion property fit for its intended use on human skin, since it has been held that optimization of a result effective variable involves only routine skill in the art.

15. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lucast et al. in view of Wildeman et al. (U.S. Patent No. 3,967,472).

Lucast et al. do not disclose the stitches of the fabric to be formed from loops from the fibers of the web. Wildeman et al. disclose that stitch-bonded fabrics may be stitched with the loops from the web (column 3, lines 40-68). It would have been obvious to a person having ordinary skill in the art at the time of the invention to stitch the fabric of Lucast et al. with loops from the web in order to avoid using extra stitching thread, as taught by Wildeman et al.

16. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lucast et al. in view of Bodenschatz et al. (U.S. Patent No. 6,074,965).

Lucast et al. do not teach reinforcing fibers in the nonwoven backing layer. Bodenschatz et al. teach a medical material that is supported with high-strength fibers with a maximum tensile strength over 60 cN/tex (Abstract). It would have been obvious to one having ordinary skill in the art to reinforce the stitch-bonded nonwoven web of

Art Unit: 1771

Lucast et al. with high-strength fibers in order to create a tape with increased strength, as taught by Bodenschatz et al.

17. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lucast et al. in view of Seabold et al. (U.S. Patent No. 4,315,047).

Lucast et al. do not disclose coating the backing material with metallic substances. Seabold et al. teach that adhesive tapes may be coated with metal vapor on the backside as a means of rendering the tape opaque (column 6, lines 65-68). It would have been obvious to one having ordinary skill in the art to add metal vapor to the backing of Lucast et al. in order to make the tape non-transparent, as taught by Seabold et al.

18. Claims 31 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lucast et al. in view of Kantner et al.

Lucast et al. do not teach incorporating pharmacologically active agents as not in co-mixture with the adhesive. Kantner et al. teach that adhesive materials in the medical field can frequently be used to transport drugs through the skin (Abstract). Kantner et al. disclose several examples of biologically active material that would exist in particle form that can be incorporated into the adhesive (column 9, lines 28-41). It would have been obvious to a person having ordinary skill in the art at the time of the invention to incorporate active agents that are not in co-mixture with the adhesive composition in the medical tape of Lucast et al. in order to provide various healing properties to the tape, as taught by Kantner et al.

Art Unit: 1771

19. Claims 1, 5, 7-10, 13, 16-18, 20, 23-26, and 29-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Merkle et al. (U.S. Patent No. 5,527,536) in view of Ganschow (U.S. Patent No. 5,629,078).

Merkle et al. disclose a medical patch for controlled release of pharmacologically active agents (Abstract). The adhesive comprises a block copolymer that comprises polystyrene for one block and a mixture of ethylene and butylenes for another block (Abstract). Merkle et al. do not disclose the backing material may be a stitch-bonded fabric. Ganschow the carrier material of an adhesive tape may be a stitch-bonded web and that such a web allows for simple construction when making tape (column 1, lines 9-28). It would have been obvious to a person having ordinary skill in the art at the time of the invention to use the stitch-bonded backing of Ganschow for the backing material of Merkle et al. in order to provide an backing with better tearable properties than adhesive film. With regard to claims 5 and 23, Ganschow discloses the fabric to have a basis weight of 100 gsm (column 2, lines 17-18). With regard to claims 8 and 24, Merkle et al. disclose the active substance is present in an amount between 2.5 and 25% by weight (Abstract). With regard to claims 10, 25, and 26, although Merkle et al. do not explicitly teach the limitations of dynamic-complex glass transition temperatures at a frequency of 0.1 rad/s, it is reasonable to presume that said limitations are inherent to the invention. Support for said presumption is found in the use of similar materials (i.e. adhesive composition comprising styrene block copolymers) and in the similar production steps (i.e. coating the adhesive on a stitch-bonded fabric) used to produce the medical tape. The burden is upon the Applicant to prove otherwise. *In re*

Art Unit: 1771

Fitzgerald, 205 USPQ 594. In the alternative, it would have been obvious to one having ordinary skill in the art to use adhesive with the claimed glass transition temperatures in order to provide the optimal amount of tackiness for use as a medical tape. With regard to claim 13, Merkle et al. disclose spraying the adhesive (column 5, line 1). With regard to claim 16, the adhesive could be sterilized via radiation. With regard to claims 17 and 18, Ganschow discloses adding foam with a release coating to the backing material (Abstract). This layer would also cover the backing material according to claim 20.

Response to Arguments

20. Applicant's arguments with respect to claims 1-34 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

21. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: U.S. Patent No. 6,630,227 to Himmelsbach et al. and U.S. Patent No. 6,459,013 to Himmelsbach.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeremy R. Pierce whose telephone number is (571) 272-1479. The examiner can normally be reached on Monday-Thursday 7-4:30 and alternate Fridays 7-4.

Art Unit: 1771

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on (571) 272-1478. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-0994.
